

NOTE: This document was made on October 8th and was used throughout the week to take notes. This week was spent doing research but in the end downloading programs, and initializing Node.JS

October 8th (10/8) - October(10/11)

Goals

- Research backend
  - Features we may want to add (fuzzy search, etc)
- Figure out database
  - (mongoDB most likely)
- Figure out matching algorithm

October 15th (10/15)

Figma

- Creating the initial website design on figma

Next js

- Setting up Next.JS for the website to use react

MongoDB

- Eddy is trying to connect with mongodb with express
- Connect to it using react with next js to see which is easier to use for our purposes

End of Week Recap:

- This week consisted of us setting up backend framework and downloading Node.JS. We spent a lot of time doing research on how to get started, and had trouble getting the programs running but in the end we figured it out. We also downloaded MongoDB and started researching JSX.

Future Goal:

- Start contributing data and doing work in Node.JS.
- Possibly meet with Anne again to talk about how we can develop our idea and expand on the project to do more than just matching users to each other
- Finalize on which webscraper to use
- Figma and Web design details?
